

LED LIGHTING SOLUTIONS

Welcome to our world. Welcome to UNLIMITED POSSIBILITIES

STORY OF SUCCESS

Asfour Crystal's roots date back to 1961, originating In Egypt to lay a solid foundation for global success, We transform any space into an unforgettable and inspiring place, With our exquisite custom-made glass lighting designs Engaging with the past and future. We seek to unlock the best potential for our clients. Combining the ancient Egyptian craftsmanship with the latest technologies is our emphasis. Alongside with interior design and architecture, we have always taken pride in delivering our unique design and manufacturing solutions.

FACTS AND FIGURES

The World's largest crystal producer

Guinness awarded for largest and heaviest chandelier worldwide

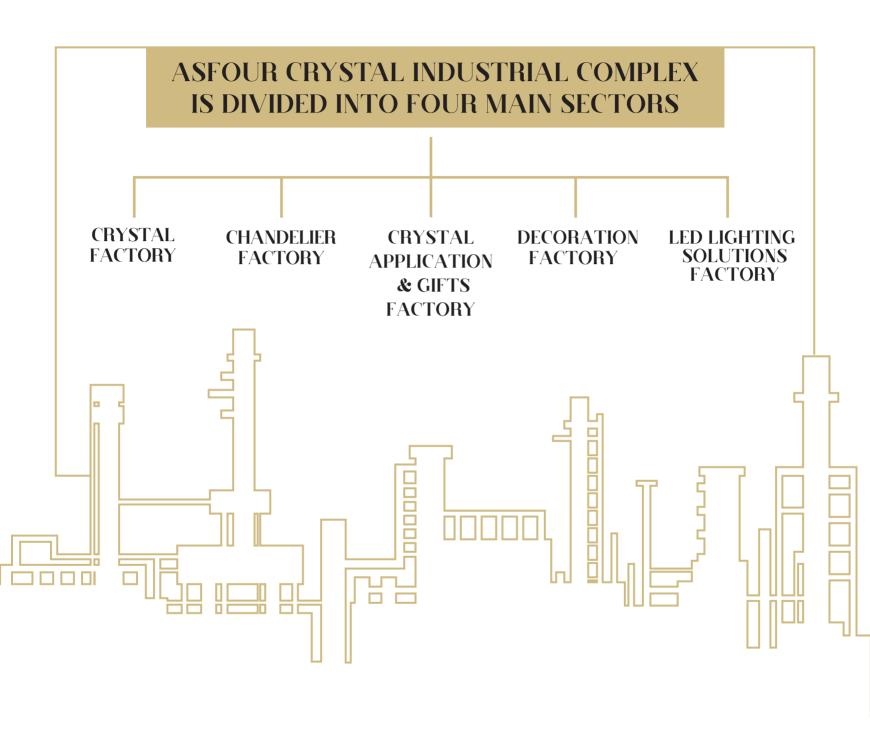

Wide global presence in 70 countries around the global

Largest chandelier manufacturer in Africa and MENA region

70
COUNTRIES
AROUND
THE WORLD

WHY US

PRODUCTION:

Our state-of-art manufacturing facility is focused on producing sustainable LED lighting products in line with the local & international standards. Our factories and production processes are continually audited by local and international bodies at regular intervals for maintaining quality.

The facilities also hold ISO 2015-9001,ISO2015-14001-,ISO2018-45001-, CB-SE95060-A1M2, CB-SE95518-M1, and E18-20416-31- certifications.

₩ R&D:

With combined experience of engineers, designers, interdisciplinary integration specialists. Our R&D teamwork in total synergy to develop high performing, long life, and energy efficient LED lighting products. We bring meticulous attention to detail, unwavering dedication and exceptional know-how on customization requirements of our clients as well.

Y QUALITY:

The performance, reliability and longevity of an LED luminaire relies heavily on the quality of its component parts. Our quality system makes sure that there is no compromise on quality of materials and components right from the receiving stage till it becomes a complete product. A series of inspection and testing procedures is in place to ensure the products meet the requirements and is in compliance with the industry standards.

TESTING:

Our products undergo rigorous testing for electrical stability, lighting performance, extreme temperature, water resistance, surge protection and humidity conditions to ensure reliability, energy savings and long functional life. Each individual piece is tested for its performance on ageing conditions and continuous turn on tests. The facility is also capable of producing photometric test results and IES files for lighting design purposes.

Y OPTICS:

Our optical components (reflectors, lenses, TIR optics, diffusers) are carefully chosen to ensure quality lighting and are designed to achieve desired illumination requirements. We make sure the light produced from our high efficacy light source is collected, magnified, directed and distributed with color uniformity to the target surface.

Y LED DRIVER:

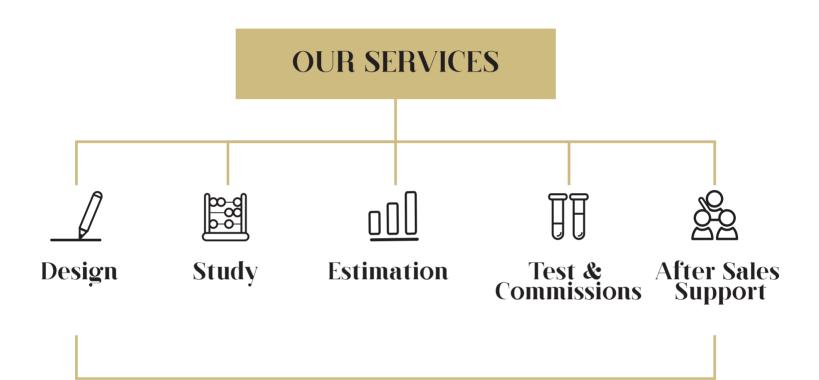

Our LED drivers comply with the international standards of electrical safety and electromagnetic radiations (LVD/EMC) are energy efficient (P.F. >0.9, eff. >%90) and are designed to provide constant current at safe values to drive the LED chips at safe limits which is important in ensuring longer life span and color consistency of the chip. They are also equipped with over current, over voltage and surge protection circuits.

Y LED CHIPS:

We use LED chips from top brands like CREE, NICHIA, PHILIPS LUMILEDS, OSRAM, EVRLIGHT, and CITIZEN. etc., which has superior lighting properties like high luminous efficacy (120-160ImJW), high CRI (>80-90), high color stability (SOCM 5-3).

HOUSING:

Most products are made from high grade aluminum with high thermal heat transferring capabilities, which plays a crucial part in ensuring high life span of LED chips and maintaining color stability. The heat sinks are designed to help maximize heat dissipation so as to keep the LED junction temperature within safe limits
